VELOCITY WEAR

Image brief & AI prompt guide

Every image the website needs, with its exact size, where it appears, how it should look, and a ready-to-use prompt for AI image tools (Midjourney, DALL-E / ChatGPT, Adobe Firefly, Leonardo, Ideogram, Flux...).

Prepared for the Velocity Wear Next.js website

How to use this guide

The website currently uses images from the original sports-equipment template (cricket bats, rackets, dumbbells). This guide lists every image that should be replaced to turn it into a **sportswear** store, in the order they appear on the site. Each card gives you:

- **ID** - use it as the file name when you send the images back (e.g. `H01.webp`), so they can be wired into the site.
- **Size** - the exact pixel size to export. **Ratio** - the aspect ratio to choose in your AI tool.
- **Notes** - composition rules (where text sits on top, what must stay empty).
- **Prompt** - a complete prompt, already including the brand style. Copy it as-is, then tweak.

Workflow

1. Pick a tool and keep the **same tool, model and style settings** for a whole section (all 12 products together, all hero slides together). Consistency matters more than any single image.
2. Set the aspect ratio from the **Ratio** column. If your tool can't do that ratio, generate the nearest one (shown in brackets) and crop.
3. Add the **negative prompt** below if your tool supports one (Leonardo, Stable Diffusion, Flux). In Midjourney add `--no text, logo, watermark`.
4. Generate 4+ variations, choose the best, check hands, faces, seams and shoes up close. Upscale if the result is smaller than the target size.
5. Crop/resize to the exact **Size**, export as **WebP, quality 80** (JPG 80% is fine too). Target under 300 KB per image (under 150 KB for products and thumbnails).
6. Name each file with its ID and send them over; they will replace the old images and the product/blog text will be updated to match.

Tool cheat-sheet

Tool	How to set the ratio	Tip
Midjourney	Add `--ar 16:9` (or 2:1, 1:1, 7:8...) to the end of the prompt	Add `--style raw --v 7` for more photographic results
ChatGPT / DALL-E	Say "landscape 16:9", "square" or "portrait" in the prompt (sizes: 1536x1024, 1024x1024, 1024x1536) then crop	Ask for "photorealistic" and paste the prompt exactly
Adobe Firefly	Aspect ratio menu: Widescreen 16:9, Square 1:1, Portrait 3:4	Content type: Photo. Commercially safe output
Leonardo / Flux / SDXL	Set custom width/height to the ratio, e.g. 1344x768 for 16:9	Paste the negative prompt into the negative field

Negative prompt (paste where supported)

```
text, letters, words, captions, logos, brand marks, watermarks, signatures, extra fingers,
deformed hands, distorted faces, extra limbs, plastic skin, blurry subject, low resolution,
oversaturated colours, cluttered background, cropped head or feet (unless asked)
```

Brand look & feel

The site design is dark, bold and energetic: near-black backgrounds, big condensed headlines (Oswald) and a neon lime accent. Images should feel like a premium performance-sportswear campaign: real athletes in motion, dramatic light, a calm colour palette, and the lime colour used only as a small accent (a zip, a lace, a reflection).

Colour	Hex	Use in images
Lime (accent)	`#E1EC2B`	buttons, highlights - one small accent per image (laces, zip, trim, light)
Off-black	`#0E0E0E`	main backgrounds, hero shadows, dark garments
Dark shade	`#2A2520`	warm dark backgrounds
Cream	`#F8F6EB`	light garments, light sections
Mid grey	`#737373`	secondary garments, concrete, studio greys

Do

- Real, athletic, diverse people (different ages, body types, skin tones), natural poses, real sweat and texture.
- Garments in charcoal, off-black, cream, grey and white; one lime accent per image at most.
- Motion: blur, light trails, splashes, chalk dust - the brand is about speed ("Velocity").
- Plain, unbranded garments. The Velocity Wear logo can be added later in editing.

Don't

- No text, slogans or logos inside images (AI tools misspell them) - especially no logos of other sports brands.
- No bright rainbow colours, cartoon or 3D-render looks, or heavy beauty retouching.
- Don't change the sizes - the layout is built around them.

Style suffix used in the prompts

Lifestyle / campaign prompts end with:

```
editorial sportswear campaign photography, shot on a full-frame camera, natural skin texture, crisp fabric detail, cinematic contrast, deep charcoal and off-black tones with a single neon lime (#E1EC2B) accent, clean modern look, no text, no logos, no watermarks
```

Product packshot prompts end with:

```
professional e-commerce product photo, pure white background (#FFFFFF), soft even studio lighting, subtle soft shadow under the product, product centred with about 12% empty margin on every side, sharp focus across the whole garment, true-to-life colours, no text, no logo, no model
```

10. Not for AI image tools

These need a designer or real assets:

Item	Where	What to do
Velocity Wear logo (dark + light versions)	Header, footer, log in pages	SVG. Have a designer create it, or use a logo tool; AI image generators cannot produce clean vector logos.
Favicon / app icons	Browser tab, phone home screen	PNG at 32x32, 48x48, 180x180, 192x192 and 512x512 - exported from the final logo mark.
Partner / brand logos strip	About page "leading brands"	Use real logos of brands you actually stock or partner with (with permission), or I can remove this section. Never AI-generate other companies' logos.
Small icons (bag, arrow, stars)	Buttons, ratings	Already SVG icons in the site; no change needed.
